

Rely on UL for Cosmetic Products Safety

UL's comprehensive quality assurance programs can mitigate risk, help ensure safety and regulatory compliance, and facilitate global market access.

From concept development to distribution, UL helps ensure the safety, quality, and consumer acceptance of your products. Our full-cycle quality assurance services include:

Regulatory Consultation

- Label review
- Safety evaluation, including Cosmetic Product Safety Report
- Toxicological risk assessment
- Identification, evaluation, and issue of mandatory documents including Product Information File
- Global market access consultation including notification, registration, and authorization of products

GMP Facility Audits

- ISO 22716 attestation of conformity to Good Manufacturing Practices for cosmetics manufacturers

Dermatological/Safety/Effectiveness

- In vivo patch and in-use testing
- Stability testing to determine shelf-life and Period After Opening (PAO)
- Claim substantiation

Microbiological

- Challenge testing according to CTFA (Cosmetic Toiletry and Fragrance Association), European Pharmacopoeia, and U.S. Pharmacopeial Convention (USP)
- Microbiological testing according to ISO, CTFA, Cosmetics Europe and European Pharmacopoeia
- In-use testing with microbiological control according to CTFA Microbiology Guidelines

Chemical

- Presence of heavy metals
- Determination of preservatives, colourants, phthalates, and more
- REACH compliance

Packaging

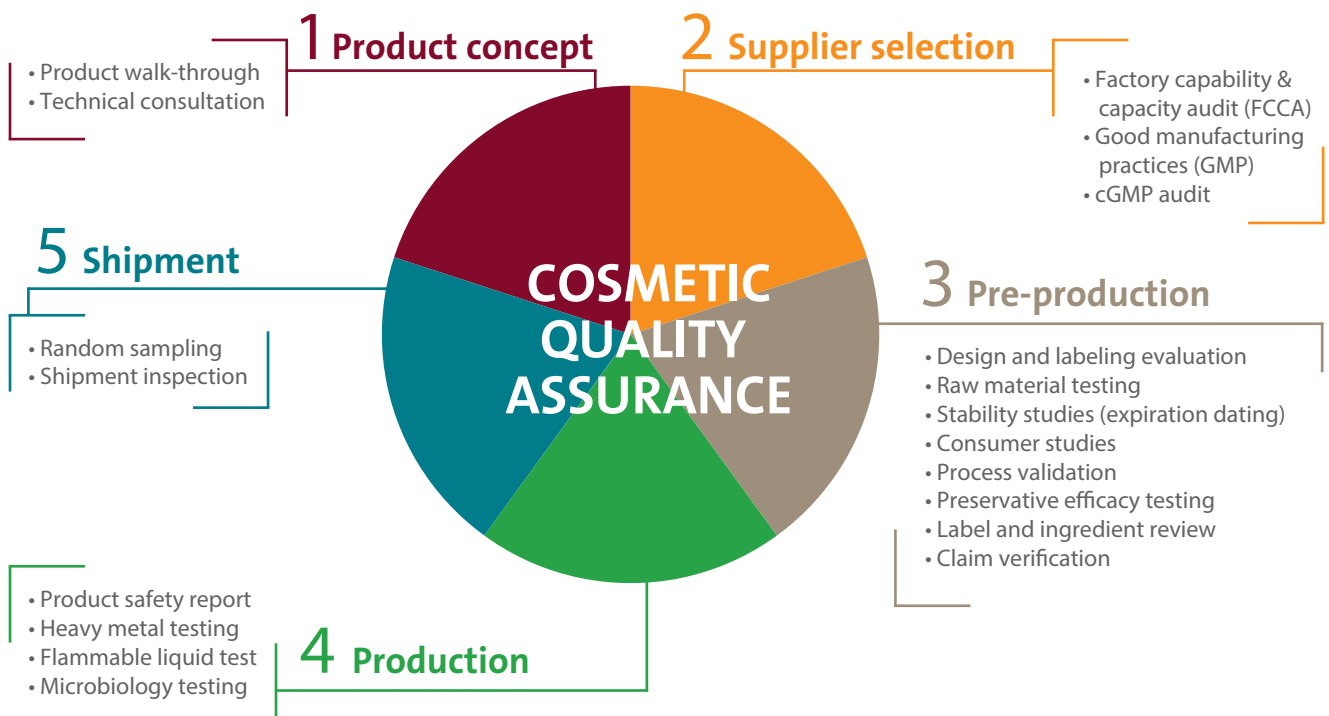

- Chemical testing according to NERC legislation and European Directives
- Physical testing including ISTA and ISO vertical impact
- Technical evaluation for suitability in the cosmetic sector
