

Hand Sanitizers

THE DO'S AND DON'TS

DO

Do check if an alcohol based hand sanitizer – with active ingredients such as ethanol or isopropyl – is formulated with the minimum alcohol concentration of 60% for highest effectiveness

Do supervise toddlers or older children while they use the product and never let your child lick their hands immediately afterwards

Do apply a hand sanitizer on dried hands starting from the back to the wrist and then continuing on the palm, fingers, interdigital spaces, nails and under jewelry until when your skin will be dry again

DON'T

Do not produce your homemade hand sanitizers mixing chemicals that can cause hazardous inhalation or skin irritations

Do not apply hand sanitizer on visibly dirty or greasy hands—the cleaner your hands are, the better!

Do not replace hand washing with the use of hand sanitizers
